

Getting Started

Quickstart Guide

Welcome to the Allstar Partner API Quickstart Guide. This guide will walk you through the initial steps to get you started with our API, enabling you to generate and display game highlights for your users. Follow these steps to begin your journey with the Allstar Partner API.

Step 1: Familiarize Yourself with the API

Before diving into coding, it's essential to understand what the Allstar Partner API offers. Our API allows you to interface directly with Allstar Gaming to generate highlights from your users' favorite video games in the cloud. You'll need to get acquainted with several key aspects:

- **Webhook Events Response:** Understand how to handle responses from webhook events for clip processing notifications. See [Webhooks Events](#) for more details.
- **Use Cases:** Identify the specific use case for the game you are testing.

Step 2: Request an API Key

To interact with the Allstar Partner API, you'll need a valid API key. This key is essential for making secured requests to our endpoints. You can obtain your API key from your [dashboard](#). See [Authentication](#) for info.

Step 3: Make Your First Request

Here's a simple example to fetch or submit data to Allstar using the HTTP method appropriate for your action (GET to fetch and POST to create):

```
POST /api/clip_request HTTP/1.1
Host: prt.allstar.gg
X-API-Key: YOUR_API_KEY_HERE
Content-Type: application/json

{
  "steamId": "STEAMID64",
  "demoUrl": "VALID_MATCH_REPLAY_URL",
  "webhookUrl": "YOUR_PARTNER_LISTENER_URL",
  "rounds": [1],
  "username": "USERNAME",
  "useCase": "USE_CASE"
}
```

Ensure your requests are made over HTTPS to comply with our security standards.

Step 4: Read About Video Player Integration

After your clip has been processed and you've received a webhook notification, it's time to display the clip on your site. Our documentation provides detailed instructions on integrating the Allstar iframe video player, including all required and optional parameters to customize the viewing experience. Refer to the [Video Player](#) section for more information.

```
<iframe allow="clipboard-write"
        allowfullscreen
        mozallowfullscreen
        webkitallowfullscreen
        src="https://allstar.gg/iframe?clip=YOUR_CLIP_ID&known=true&platform=YOUR_INTERNAL_PARTNE
    </iframe>
```

This iframe code snippet should be tailored with your specific details, including the clip ID, partner ID, use case, and the unique identifier of the user watching the clip.

Conclusion

By following these steps, you're well on your way to integrating the Allstar Partner API into your application or website. Should you encounter any issues or have further questions, please refer to our comprehensive [API documentation](#) or contact our support team for assistance.

Happy coding, and we look forward to seeing the amazing experiences you'll create for your users!
